## SUBMISSION INFORMATION FOR AMENDED STRUCTURE PLAN SP34 - NORTH STONEVILLE

### Kids Version

This information is to help you choose topics and information for your letter (submission) about North Stoneville. We ask that you to use our words as a 'guide', and where possible, use your own words to write your letter. Include one, or as many points as you like, and speak from your heart!

This Kids Version outlines the basic issues in simple terms. Teenagers might like to look at the Short Version which has more detail.

Whilst Bushfire risk is an important aspect we feel that it's a sensitive topic for children so would prefer to leave it to parents to discuss this issue if you think its appropriate for your child.

**Get your parents to help you to send in your submission (letter) by following the link below.**

<https://consultation.dph.wa.gov.au/land-use-planning/amended-north-stoneville-structure-plan-34/consultation/>

**Or Mail to: Dept of Planning, Planning Appeals - Locked Bag 2506, Perth WA 6001**

**It's important to start your submission letter with: "I'm totally against the amended plan for North Stoneville. Reference number DR 189/2020"**

**Deadline for submissions is Monday 8<sup>th</sup> May**

It might be easier if you write your letter in Word or on paper and then copy and paste it into the submission box. If you have any problems please contact us by email [saveperthhillsinc@gmail.com](mailto:saveperthhillsinc@gmail.com) and we can organise someone to help. It would be lovely if you could send us a copy.

## Key Points

1. At 535 hectares, the site is 136-hectares bigger than Kings Park, the area is part of an International Biodiversity Hotspot and has lots of important plants and animals that are under threat.
2. All three threatened and endangered Black Cockatoos have been seen, nesting, feeding, and roosting on the site, land clearing has been identified as a key threat.
3. Baudin's Black Cockatoo is about to be listed as critically endangered. The Black cockatoos will be extinct in 20 years if land clearing of Cockatoo habitat continues.

4. Almost 300 hectares of Black Cockatoo foraging, roosting and nesting habitat would be disturbed or destroyed – that’s about 150 football fields.

5. Cockatoo nesting trees need to be over 200 years old to have nesting hollows. A survey identified 27 potential nesting trees, at least 15 of those 27 trees will be destroyed.

6. The area provides habitat for Chuditch and Brush Tailed Phascogale. Clearing of land and the introduction of cats and dogs will have a disastrous impact on these animals.

*Brush Tailed Phascogale*

*Chuditch*

7. At least 50,000 mature Jarrah and Marri trees will be bulldozed.

8. There will be at least 8000 extra traffic movements on Stoneville Rd- every day.

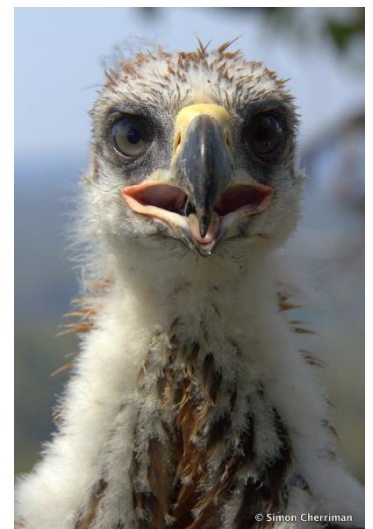

9. No public transport planned so people will need to use cars resulting in an increase in greenhouse gas emissions.

10. The Waste Water Treatment Plant is similar to the Mundaring one which often breaks down and is smelly with lots of mosquitos.

11. Suzannah and Jane Brooks could be polluted.

12. The Wedge Tailed Eagles will leave because it’s too noisy, they have nested there for decades.

13. Visitors enjoy the hills for the natural environment, wildlife, hiking, Mountain Biking, and to ‘get away from it all’.

*Eagle Chick*

**Finish with why you love living in the hills and how you think that would change eg.**

- **too much traffic on the roads to safely ride your bike or horse.**
- **Loss of animals and trees**
